Accessories.....	28-29
Ultraline Series Switches.....	30-32
Switch Mounting Information.....	33
Female Connectors for Reed Switches and Hall Effect Sensors.....	34

The **N Series** is an aluminum NFPA Interchangeable cylinder line that is designed and built to excel in the most demanding applications. The N Series encompasses many value-added features such as an extra long graphite filled cast iron rod bushing, and a standard oversized wear band that is located on the rear of the piston. These are just a sample of the features that make the N Series the Superior NFPA Interchangeable air cylinder line.

Tube

The tube is hard coat anodized. The hard coating is an electro-chemical process, which produces a very dense surface of aluminum oxide. This surface has extreme hardness (60 RC), excellent wear and corrosion resistance, and a low coefficient of friction.

End Caps

The end caps are accurately machined from (6061-T6) solid aluminum bar stock. They are clear anodized for corrosion resistance. Additionally, a recess on the piston-mating surface (at both ends) enables the air to work on a larger piston area for effortless breakaway.

Rod Bushing

The N Series includes a graphite filled, cast iron rod bushing that is extra long in length. Graphite filled offers the best bearing surface when using a hard chrome plated steel piston rod. Cast iron provides maximum resistance against wear. The added length adds superior alignment and support of the piston rod as well as provides maximum load bearing support.

Rod Seal

The nitrile compound rod seal is extremely durable. The U-Cup design ensures proper sealing and long life.

Rod Wiper

The standard rod wiper construction is a highly durable polyurethane.

Piston Rod

High strength steel (100,000 psi minimum yield) piston rod has a ground, polished, and chrome plated surface. This surface provides maximum life for both the rod bushing and the seals.

Bushing Retainer

The bushing retainer allows cartridge removal (cylinder repair) without complete disassembly (in most cases).

Tie Rods

The tie rods are 100,000 psi minimum yield steel for maximum holding power. The threads are roll formed for superior strength and engagement.

Piston Seal

The piston seal is a nitrile compound. The O-ring design is very dependable.

Wear Band

The wear band is a stable, lubricating strip located on the piston. We separated the load bearing points by locating the wear band at the rear of the piston. This maximizes column strength at full extension.

Piston

The solid aluminum alloy piston is strong and durable.

Cushion Seal

The floating cushion seal design enables rapid stroke reversal by providing instantaneous full flow to the piston. Each cushion has a flush, retained adjustment needle.

Tube End Seal

The tube end seals are compression type and reusable.

Ports

Our enhanced port design enables the cylinder to work more efficiently. Through the use of precise machining depths and tool shape, we are able to smooth the flow path into and out of the cylinder.

Standard Specifications

- Meets NFPA specifications
- Bore sizes from 1-1/2" through 6"
- Piston rod diameters from 5/8" to 1-3/4"
- Nominal pressure rating is 250 psi air
- Standard temperature -10°F to 165°F (-23°C to 74°C)
- NPTF ports
- Multitude of mounting options
- Strokes up to 48"
- Single and double rods
- Ports (standard in position # 1)
 - 3/8 NPTF for 1-1/2", 2", and 2-1/2"
 - 1/2 NPTF for 3-1/4", 4" and 5"
 - 3/4 NPTF for 6"
- Cushions: Adjustable (standard in position # 2) as well as fixed

Standard N Series Mounts

Port Size Availability

Cylinder Port Orientation

The above drawing represents port location # 1 (standard).

Note: Non-standard port size and port locations require a price adder.

Note: Larger port sizes per given bore may require slight changes in the "P" dimension.

Force Tables

The **extend force** is determined from Table 1 based on the operating pressure and cylinder bore size. Then determine the Retract Force by subtracting the "Retract Force Deduction" from the Extend Force. The "Retract Force Deduction" is found in Table 2 below corresponding to the piston rod diameter and operating pressure. These forces are theoretical based on areas with no friction allowance.

Table 1 Force Chart Extend

BORE	PISTON AREA	PRESSURE											CUBIC FEET DISPLACEMENT PER INCH OF EXTENDED STROKE

Metallic Rod Scraper

A rod scraper may be necessary when the cylinder must endure paint overspray, weld splatter or flyash.

Order as "MA" Option

Silencer Bumper Seal

Our "Silencer" design reduces the noise caused by the final impact of the piston against the cap. It also allows usage of standard pneumatic cushions in order to further reduce the amount of end of stroke noise and impact while still giving the deceleration benefits. When the cushion spear enters into the cushion seal, the cushioning effect takes place by trapping air and then metering it out at a rate set via the adjustable cushion needle.

NOTE: Silencer Bumper does not add length to the cylinder.

Technical Data

"N" Series Bore Sizes: 1-1/2", 2", 2 1/2", 4" and 5"

Temperature: -20°F to 200°F

Pressure Rating: 150 psi air
